The Cornell method

What is the Cornell method?

The Cornell method is a structured note-taking system that allows you to organise your notes to facilitate review and self-assessment.

It involves dividing the note page into three sections:

1. a note-taking area
2. a cues/questions column
3. a summary space.

Taking notes with the Cornell method

Prepare Your Page:

- Divide it into three sections - the Cue column on the left, a larger Note column on the right, and a Summary area at the bottom.

Note Column:

- Use the Note column to jot down main ideas, details, and other information during a lecture or while reading.
- Try to stick to key terms, short phrases, or concise sentences.

Cue/Question column:

- Write down questions/prompts in the cue column based on the notes you've taken or any keywords, main ideas, and study prompts.
- Add to this either afterwards or during a review.
- These cues serve as prompts for active recall during revision.
- Use these questions later to test yourself.

Summary:

- At the bottom of the page, summarise your notes, encapsulating the key points and insights in a few sentences.

Review:

- Use the Cue column to test your recall of the notes, covering the Note section.
- Try to recall as much information as possible.

When to use the Cornell method

- Ideal for integrating seminar and study notes.
- Encourages you to develop your summarising and synthesising skills.
- Applicable in any lecture or seminar setting.

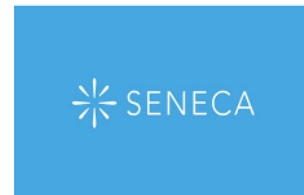

Advantages of the Cornell method

- Organised structure: The layout supports an organised approach to notetaking, helping you easily categorise and retrieve information later.
- Enhanced recall: The "Cue / Question Column" provides a quick way for self-testing and memory reinforcement.
- Summary skill: Writing summaries encourages synthesis and evaluation, making the process not just about capturing information but understanding it.
- Review-friendly: Because it's so structured, reviewing your notes is a breeze.
